Shipment Confirmation

Pallet confirmation, documents and corrections

The 'Confirm Shipping' form groups the production orders to ship and shows, per order, the quantity to ship, the already confirmed amount and the remaining. Confirmation is done on one or more pallets; a shipment may contain several orders.

1. Filters and order selection

Use the Order and Product filters to find the order. The list shows Qty to ship, Confirmed and Remaining. Select the order row.

2. Add pallet

Enter the Pallet Code (auto-incremented suggestion, unique only within the shipment) and the shipped quantity, then 'Add to shipment': the remaining decreases. Exceeding the quantity to ship is allowed with a warning.

3. Finalize

Set the shipment date and click 'Finalize shipment': two PDFs are generated (pallet list and summary) with logo, date and operator, and an email is sent to the configured recipients (Sys_shipment_email) with the PDFs attached.

4. Retrieve and correct

With 'Retrieve shipment...' you search a shipment by date, edit pallets, reprint documents and send a correction email.

Documents are archived and always reprintable: they are regenerated from saved snapshots, so they stay stable over time.

Pallet codes must be unique only within the same shipment; they may repeat in different shipments or days.
