Version 2.3.6

FQC Products - Updates

Plan filter, report by order, continuous session

Updates to the FQC Products checks execution and its report.

1. 'Only codes with a plan' filter

In the execution screen a checkbox filters the product list to show only codes that have a verification plan (checklist) loaded.

2. Continuous session

After confirming and saving an FQC, the window no longer closes: it automatically resets (LabelCode and results) keeping client/product/checklist, ready for the next card.

3. Report by order

In the 'Validated Cards' report an Order filter was added, in addition to the existing filters (period, product code, LabelCode).

The other FQC execution functions remain unchanged.

Always verify the LabelCode before saving the checklist results.
